

Name: John Oliver Banihit
Course, Year & Section: BSIT 4-1

Student Number: 202202798
Date: 9/15/2026

ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

Using any available resources (official Git documentation, online tutorials, or the built-in git --help command), research the following topics and create a personalized 1-page (A4) cheat sheet:

1. Basic Linux commands (command, sample usage) (at least 10)
2. Basic Git commands (command, sample usage, description (use your own wordings), common options/flags

git init	git restore
git status	git branch
git add	git checkout / git switch
git commit	git merge
git log	git tag
git diff	git clone

3. the three-tree architecture of Git

You are free to use any design or color scheme, just make sure it is readable.

Submission:

1. Use PDF as the file format for your cheat sheet.
2. Upload it to your GitHub repository
3. Submit the link here: <https://drive.google.com/drive/folders/1-Y6e6E6PoLyGgB0WZ8prRCNfolpV3cj0?usp=sharing>

Reminders:

Please put a "Reference" section in the cheat sheet for the materials you cited.

I DO NOT PROHIBIT the use of AI for this activity, but please declare the extent of the use.

Sample:

"The author used [Tool Name, Version] to [specific task] during assignment preparation. The author reviewed and edited the content as needed and takes full responsibility for the final content of the work."

Or

"I have not used any AI or AI-assisted technologies to prepare this work."

Linux + Git Commands Cheat Sheet

LINUX COMMAND	SAMPLE USE	DESCRIPTION
pwd	pwd	Prints the current folder the user is in.
cd	cd project-folder	Let user change or switch folder/directry it is working on.
cd ..	cd ..	Let user go back to parent directory.
mkdir	mkdir new-project	Let user create a folder.
ls	ls	Display the lists of files.
touch	touch index.html	Creates an empty file.
cat	cat output.txt	Display the content of a file.
echo	Echo "Hello World"	Prints the argument back again.
mv	mv combined.txt dir1	Let user put file into other directory.
cp	cp output.txt Documents/backup.txt	Let user copy a file.
rm	rm dir1	Short for "remove". Let user delete a file/folder.
wc	wc combined.txt wc -l combined.txt	Short for "word count", Let user count the words in the file. Used to count the lines in the file.
."	mkdir .dir1	Let user hide a file or a folder by putting a dot before the file name

GITHUB COMMANDS	SAMPLE USE	DESCRIPTION
git init	git init	Initialize a local Git repo
gitstatus	git status	Show modified files in your commit
git add	git add .	Stage a file for next commit
git commit	git-commit -m "Dark Mode"	Save staged changes as commit
git log	git log	Prints the history of commits
git diff	git diff	Show changes that hasn't been staged yet
git restore	git restore index.html	Restore a deletedfile
git branch	git branch feature-page	Create or manage a branches
git checkout / git switch	git switch feature-page	Switch to other branch
git merge	git merge feature-page	Combine another branch to other branch
git tag	git tag v1.0	Label commit
git clone	git clone <repository-url>	Create a local copy of repository

Three-tree of Git

Working Directory > Staging Area > Repository/Commit History

The Working Directory contains the files being edited in the local machine. The Staging Area have those changing selected for the next commit using “git add”. The Repository or commit history is where changes are stored by using the command “git commit”.
